

## ELWE Technik GmbH

ELWE Technik GmbH is a medium sized enterprise with about 60 years experience in development, production and sales of technical educational systems and teachware.

ELWE was the pioneer in such educational systems and is regarded today as a nucleus for the German dual education system.

Our products are exclusively developed under our supervision at our premises in Schandelah near Braunschweig. They are produced by specialized technicians and undergo an intensive and acute in-house quality control before leaving our stores.

The ELWE systems promote the principle of "learning with all senses", which means, the student is practically trained on set-ups made up of industrial components. This gives him a strong background and allows him a smooth transition into his practical profession.

Our products are sustainable and stand up to the tradition and quality of "Made in Germany". They have a timeless design, an exceptionally long life and are largely maintenance free. They are reasonably priced, but are not low price products.

The ELWE Technik GmbH operates globally. Moreover, after a complete change in the shareholdership and the management about a year ago, we defined the Arab World to be our major activity point of focus.

At present we are closely working with the Foundation of Technical Education (FTE) in Iraq and the Technical and Vocational Training Corporation (TVTC) in Saudi Arabia. We are also represented in Egypt, Syria and Tunisia, and have recently built close relationships with Iran, as well.

Although we see ourselves only partly as suppliers of systems for technical education and training, our basic competency lies primarily in comprehensively supporting our clients in project development and escorting.

Being involved already in the project planning stage, we are able to present a conclusive plan from start to end - from conceptualisation up to training the trainer - a plan that we can financially account for and execute in a modular step-wise fashion. Moreover, our aim is to accompany graduates and coach them, for example in establishing their own business.

This task is taken up by the German Training Academy (GTA), a subsidiary of ELWE Technik.

Our training program covers all relevant areas of technical engineering and offers the possibility, both from content as well as location, to be adjusted individually according to the needs of the client. Trainers for these tasks are selected professionals from within our company staff as well as from our rich network of external experts.

We are also pleased to offer our help in establishing contacts to renowned universities and colleges in Germany and in assisting trainees through goal-oriented coaching.

## Examples of our products

Training system  
"Profibus with PLC, motor and gear"

Training system "Wind Generator"

Training system "Sensoric"

Training system "CAN BUS"

Training system "Photovoltaic"

## Our experimental systems

Panel systems

Modular systems

Plug-in systems

Wall systems

Portable systems

Automotive section model

## Laboratory Furnishing and Training Stations
